Press Release

Katalyst Network Group Achieves Cisco's ATP for Data Center Unified Computing in USA: Connecting the essential elements for a robust Data Center

Hickory, NC, (February 22, 2011) - Katalyst Network Group announced today that it achieved the Advanced Technology Partner for Data Center Unified Computing (UCS) designation from Cisco (NASDAQ: CSCO). This coveted designation recognizes Katalyst as having satisfied the rigid ATP requirements and criteria necessary to earn this designation.

Reaching this important milestone indicates that Katalyst is positioned to design and deploy a variety of end-to-end Cisco® data center solutions while providing support services to help customers achieve greater functionality and cost savings that will ultimately help their businesses be more competitive in their respective industries.

Undoubtedly, Katalyst will lead in the next era of the data center by bringing proven solutions to network inefficiencies that are affecting customers today. The Cisco UCS platform overcomes these issues by integrating compute, virtualization, network, and storage access into a cohesive system designed to reduce the total cost of ownership (TCO) and increase business velocity.

"The expertise that the Katalyst team has developed in the delivery of this compelling datacenter technology will provide our clients an opportunity to increase business efficiencies and offer yet another competitive technology advantage within their given market," said Christopher Christy, Principal and Managing Partner of Katalyst Network Group.

About Katalyst

Katalyst Network Group is focused on increasing our client's competitive advantage with an information technology strategy that aligns with their business goals. Katalyst strives for IT designs to accommodate technology solutions that enhance their business capabilities by consistently and securely optimizing their infrastructure. Our reputation for successful results with integration of voice, video, data, and security into a single infrastructure that drives increased productivity while reducing costs is the core of our focus.

We offer turn-key technical solutions and integration services. This includes planning, deploying and maintaining information technology communications and security infrastructure. Katalyst partners with industry leading vendors such as Cisco, EMC, VMware, and Microsoft.
