

VIDEO COLLABORATION

A 2:00pm web conference meeting starts at 2:05pm
"sorry guys we had some technical difficulties."

IS THIS A COMMON PRACTICE FOR YOUR ORGANIZATION?

It was for a cutting-edge accounting software company. Unfortunately, it was so common they usually started setting up for their meetings 15 minutes prior to ensure a sound setup.

KATALYST

The customer brought in Katalyst early in the planning stages to help them come up with creative and innovative ways to integrate voice, video, data, and security into a single infrastructure. It was important that the technology matched the contemporary culture of their new 200,000 square-foot space that also included shuffleboard, multiple gyms and basketball courts.

The project was a massive undertaking that included Cisco solutions of WebEx, MX & SX video units, Spark and nearly two dozen Spark Boards. Katalyst consistently followed a refined 5- step process of Design, Install, Train, Support and Manage that ensures results that are beyond expectations.

AS A RESULT, THE CUSTOMER
USES VIDEO SEAMLESSLY
THROUGHOUT THE DAY ACROSS
MULTIPLE VIDEO UNITS. THE BEST
PART – IT WORKS, IT'S EASY AND
THEY START ON TIME!
