**Company Industry**  
Financial Institution

**Location**  
North Carolina

**Company Type**  
Publicly Traded

**Employees**  
500

**Revenue**  
\$203M

## The Situation

This large financial institution with more than 60 locations was looking for a solution to solve difficult and diverse cybersecurity tasks such as firewall management, compliance automation, and log monitoring. They wanted a solution that would allow them to import logs from a variety of sources and tech vendors and were looking for the ability to automate alerts based on customizable business rules.

## The Solutions

Katalyst provided cybersecurity monitoring and alerting with ProVision for recommended log sources including firewall, domain controllers, AV/EDR, Office 365/Gmail, servers, and cloud accounts. Additionally, Foresite provided firewall management and our automated compliance platform, FIRM, along with vulnerability scanning for a proactive, on-going security approach.
