The Situation

City governments operate many critical services that require 24/7 protection and early detection of threats. This municipality with a population of 30,000+ was looking for a way to support their security needs without adding additional staff or needing to completely overhaul their existing technology setup.

The Solutions

Katalyst provided this customer with 24/7/365 threat monitoring and alerting for Active Directory, servers, Office 365, and firewalls. Our cloud-based ProVision SIEM was a natural fit for their existing environment which did not have virtual machines and our U.S.-based SOC team was able to provide quick response during the customer's non-work hours. Foresite expanded the city's protection with firewall management and MDR.
