

— BACKUP & DISASTER RECOVERY READINESS

When's the last time you tested your backup and disaster recovery plan?

Most backup tools tell you a job completed. That is not the same as knowing you can recover. We monitor the jobs, test the restore, and prove it actually works, before the next outage forces the question.

● HURRICANE SEASON IS ALREADY UNDERWAY

24/7 Continuous monitoring, not quarterly check-ins

30 MIN Scoping and discovery call to get started

30-DAY Satisfaction Guarantee

— THE READINESS REVIEW

A clear picture of where you stand, in writing.

01

What is protected

A current inventory of every critical system and platform in scope, and everything that is not yet covered.

02

Whether it is working

Job success history, silent failures, and the gaps between what you believe is running and what actually is.

03

Whether you can recover

A test restore of representative data, with documented results and the time it took to bring it back.

04

Where continuity has gaps

Recovery order, staffing, communications, and the decisions nobody has made yet for a regional outage.

— WHAT WE TAKE ACCOUNTABILITY FOR

Backups that complete, consistently

A backup job that fails quietly is worse than no backup, because it buys you confidence you have not earned. We check every protected system around the clock and flag failures the same day they happen.

Microsoft 365 is your data, and your responsibility

Microsoft keeps the service running. Microsoft does not keep your data recoverable. Retention windows in Exchange, OneDrive, SharePoint, and Teams are short and they are not a backup.

— GETTING STARTED

1

Assess

Inventory what is protected today and identify the gaps. If you move your backups to Katalyst, we onboard every system.

2

Verify

Confirm backup jobs are actually completing, with failures flagged the same day, not the same quarter.

3

Test restores

Recover real data on a defined schedule and document what came back, and how long it took, in writing.

4

Run a DR test

The big target: an actual disaster recovery exercise to recover a full site or your operations, not just a file.

— WHY NOW

Hurricane season is a deadline, not a surprise.

You have until the next storm to find out whether your backups actually work. Most organizations find out during. We verify recoverability before the season, and we test the continuity plan around it, so the first rehearsal is not the real event.

Most clients start with the **Backup & DR Readiness Review**, a scoped engagement to document where you stand, then move into **Backup and DR as a Service**, with Katalyst running monitoring, restores, and DR testing on an ongoing basis.

NEXT STEP

Book your Readiness Review before the season gets busy.

We will inventory what is protected, identify what is not, verify whether your restores actually work, and tell you where your continuity plan has gaps. Thirty minutes to scope it. Backed by our 30-Day Satisfaction Guarantee.
