

Backup & Disaster Recovery

Backups only matter if they restore. We design, validate, and test backup and recovery, so your data and your operations come back when it counts.

THE CHALLENGE

Backups that were never tested

They run every night, but no one has confirmed a restore actually works.

Recovery times no one has measured

If systems went down today, how long to recover is a guess.

Exposure to ransomware

Backups that are not immutable can be encrypted right alongside your data.

Staffing a support engineer would be very expensive. By contracting with Katalyst Managed Services I am able to have that skill set available to me at a fraction of the cost of a full-time employee.

DIRECTOR OF IT • NC STATE GOVERNMENT

WHAT'S INCLUDED

Recovery you can count on

- **Immutable, redundant backups.** Protected copies that ransomware cannot encrypt or delete.
- **Disaster recovery design.** Recovery planned around your actual RTO and RPO goals.
- **Regular test restores.** Recovery proven on a schedule, so there are no surprises.
- **Backup validation and reporting.** Ongoing verification and evidence that backups are healthy.

Designed and validated, not just configured, and operated by **U.S.-based engineers.**

THE OUTCOME

Proven recovery

Restores tested, not assumed.

Ransomware resilience

Immutable copies you can fall back on.

Predictable downtime

Recovery times you have actually measured.

Simplified compliance

Evidence your data is protected.

WHAT WE PROTECT

Servers	Microsoft 365	Cloud Workloads
Endpoints	Databases	RTO / RPO Design

HOW WE DELIVER IT

ASSESS

Baseline & Onboarding

TRANSFORM

Optimize & Standardize

MANAGE

24/7 Operations

Could you recover today?

Let's confirm your backups actually restore, and that your recovery times match the business.
