

Managed Cloud

Azure, AWS, GCP, and VMware, designed, secured, and operated as part of your Digital Backbone. We architect for performance and compliance, then manage it continuously so cloud delivers ROI instead of a runaway bill.

THE CHALLENGE

Cloud spend that creeps

Over-provisioned resources, idle instances, and the wrong pricing models quietly inflate the bill month after month.

Security left to defaults

Cloud is secure only when it is configured that way. Default settings and open access leave gaps attackers look for.

No one truly owning it

Workloads run, but performance, cost, and compliance drift because no one is accountable day to day.

94%

of enterprises use cloud services

30%

of cloud spend is wasted without active management

40%

infrastructure cost reduction moving to managed cloud

99.99%

uptime target with redundant cloud architecture

WHAT'S INCLUDED

Cloud, run as an operational discipline

- **Architecture and migration.** We design for performance, security, and cost from day one, then migrate workloads in disciplined phases with validation and rollback at every step.
- **Cost optimization.** Resources get right-sized and matched to the right pricing models, then watched so savings hold instead of eroding.
- **Security and compliance.** Least-privilege access, encryption in transit and at rest, segmentation, and logging built in, aligned to HIPAA, PCI-DSS, and CMMC where they apply.
- **24x7 management and monitoring.** We monitor health around the clock, patch and tune continuously, and report clearly on what you are paying for and why.

Multi-cloud expertise across **Azure, AWS, GCP, and VMware**, delivered by U.S.-based engineers.

PLATFORMS WE MANAGE

Microsoft Azure

AWS

Google Cloud

VMware Cloud

Hybrid

Microsoft 365

THE OUTCOME

Lower, predictable spend

Right-sized resources and the right pricing, watched so waste does not return.

Security by design

Hardened, compliant environments instead of risky defaults.

Reliable performance

Redundant architecture and monitoring that keep workloads fast and available.

Room to scale

Capacity that flexes with demand, without a rebuild each time you grow.

HOW WE DELIVER IT

ASSESS

Cloud Assessment

TRANSFORM

Architect & Migrate

MANAGE

Optimize & Operate

Make the cloud work for you.

We will map your workloads and model the cost, performance, and compliance impact of getting cloud right.
