

Transform connectivity. Strengthen security.

Simplify management across every site

As organizations move toward cloud-first operations and distributed workforces, traditional WAN architectures struggle to deliver the speed, security, and flexibility businesses demand. Static routing and legacy MPLS create costly bottlenecks, limited visibility, and inconsistent application performance.

Katalyst modernizes network infrastructure with SD-WAN from trusted partners such as Cisco Catalyst, Meraki, and Fortinet — replacing rigid, hardware-centric architectures with an intelligent, software-driven approach that optimizes routing for performance, cost, and security.

“

Our SD WAN project was kicked into high gear right as COVID hit. 22 branch sites were converted over and to say that [Katalyst Engineer] went above and beyond on this effort would be a huge understatement.”

Chris Libby, IT Director, Spero Financial

YOUR CHALLENGES & HOW KATALYST HELPS

High WAN Costs and Limited Flexibility

MPLS is expensive and inflexible, making it hard to scale or support a hybrid workforce.

Katalyst: We design SD-WAN architectures that reduce reliance on MPLS, cut circuit costs, and add flexibility through intelligent, cloud-based routing.

Inconsistent Application Performance

As applications move to the cloud, traditional WAN paths cause latency and poor video quality.

Katalyst: Our engineers configure SD-WAN to select the best path per application, improving workloads like Microsoft 365, Salesforce, and VoIP.

Limited Visibility and Control Across Sites

Traditional routers make it hard to troubleshoot or enforce consistent policies.

Katalyst: Centralized orchestration and analytics give IT full visibility and control across all sites from a single pane of glass.

Growing Security Risks with Internet Connectivity

As traffic moves outside traditional perimeters, security is harder to maintain.

Katalyst: We integrate SD-WAN with SASE frameworks, next-gen firewalls, and zero-trust principles to keep users, data, and apps secure.

82%

of organizations say network complexity and security concerns are the biggest barriers to digital transformation.

The Katalyst Guarantee

If you are not 100% satisfied with our services, we will either make it right or refund you for the last 30 days of service.
